PROBLEM STATEMENT

PS4: Inclusive Education AI to make learning accessible through regional languages and assistive technologies.

WHAT DOES THIS PROBLEM AIM TO SOLVE?

- Close learning gaps before they compound across grades.
- Personalize learning to each student's level and needs.
- Break language & accessibility barriers through regional languages and assistive support.
- Make accessibility part of the learning experience, not an add-on.

WHY DID OUR TEAM CHOOSE THIS?

- Digital access alone doesn't ensure effective learning.
- Students need content that matches their language, level and learning needs.
- Existing solutions often address these needs separately.
- Vidya Setu brings them together in one adaptive learning loop.

LEARNING GAPS

**LANGUAGE
BARRIERS**

**ACCESSIBILITY +
SUPPORT**

• “The goal is not simply to digitize learning — it is to make learning adapt to the learner.”

REAL-WORLD PROBLEM ALIGNMENTLEARN

Who faces this issue?

- Students with learning gaps, language barriers or accessibility needs.
- Teachers who need clearer insights into what each student needs next.
- Parents who need meaningful visibility into their child's progress.

What's the current gap in the system?

- Most digital learning is still one-size-fits-all.
- Learning gaps, language support and accessibility are often handled separately.
- Performance data often shows what went wrong, not what to do next.

Existing schemes / alignment

- NCERT-aligned curriculum and content
- Supports the inclusive education objective of PS4
- Designed to complement India's broader digital and inclusive education ecosystem

How does our solution fill the gap?

Vidya Setu combines adaptive learning, regional-language support, assistive technologies and teacher/parent feedback in one platform.

PROPOSED SOLUTION

Vidya Setu is an AI-powered inclusive learning platform that personalizes education around each student. It begins with an adaptive diagnostic assessment to identify prerequisite gaps and addresses them within the current-grade learning journey. Students receive curriculum-aligned learning with regional-language and accessibility support. Teachers can use existing modules or upload PDFs/photos to create learning content and assessments. In self-educated mode, parents track the learner's progress. Student activity and assessment results then feed back into the learning journey, helping teachers and parents understand what the learner needs next.

WHAT MAKES IT DIFFERENT?

NOT JUST AN AI TUTOR – AN ADAPTIVE INCLUSION LAYER AROUND THE LEARNER.

KEY FEATURES

Adaptive Diagnostic

Identify prerequisite gaps from previous grades and address them inside the current-grade learning journey.

Accessible Delivery

Support regional-language learning and accessibility-focused delivery, including a scoped sign-language avatar layer.

AI-Assisted Pipeline

Teacher uploads PDF/photo to process into a learning module; teachers can author assessments or request AI-assisted generation.

Feedback Loop

Student activity and assessment results become meaningful progress context for the adults supporting the learner.

TECH STACK & ARCHITECTURE

ARCHITECTURE

THANK
YOU

The background is a vibrant blue with a starry pattern. It features several stylized illustrations: a girl in a pink dress holding a pink tablet, a girl in a yellow and red dress holding a tablet, a boy in an orange sweater holding a smartphone, and a boy in a teal shirt holding a smartphone. A large yellow lightbulb is in the top right, and a large black arrow points down from the top center. A laptop with a green checkmark on its screen is in the bottom center, surrounded by pink stars. The text 'THANK YOU' is written in large, white, bold letters in the center.
